TECHNICAL FOCUS

Backend and APIs

Java, SQL
REST, SOAP, OpenAPI
Authentication
Authorisation

Quality and delivery

JUnit, Playwright
Integration testing
Regression testing
Code review, CI/CD

Development tools

Git, Gradle, Maven
IntelliJ IDEA

Personal projects

Spring Boot, Angular
React, TypeScript
PostgreSQL, SQLite
Supabase

Profile

Senior software engineer developing Java insurance services and APIs at Keylane. I work from requirements and technical analysis through implementation, testing and release. My earlier career in banking brings practical knowledge of operational processes and customer workflows.

Professional experience

Keylane

Senior Software Engineer

Sep 2019 - Present | Utrecht, Netherlands

- Develop and maintain Java software for insurance policy management, services and integrations.
- Help replace SOAP interfaces with REST APIs, define request and response models, and document contracts in OpenAPI while preserving compatibility.
- Investigate defects across code, data and APIs; add integration, regression and browser tests for affected behaviour.
- Refine requirements and acceptance criteria, review code, and prepare technical documentation and release notes.
- Support colleagues through mentoring, technical discussions and product demonstrations.

Scotland's Rural College

Software Developer

May - Aug 2018 | Aberdeen, United Kingdom

- Helped design and implement a pilot portal for field-trials data collection and presentation, including user authentication and authorisation.

Chidozie Nnachor

PROJECTS AND QUALIFICATIONS

EDUCATION

MSc
Information Technology

University of Aberdeen
Scotland
2018 - 2019

BSc Economics

University of Nigeria,
Nsukka
2006 - 2010

CERTIFICATION

Oracle Certified Associate

Java SE 8 Programmer

FURTHER TRAINING

DASA DevOps Fundamentals

Test Automation
Unit Testing

WebServices and XML

EARLIER CAREER

Head of Cash Operations

First Bank, Nigeria
Sep 2014 - Aug 2016

Led cash operations and customer service, including vault and ATM processes and operational investigations.

Selected engineering projects

Personal Product Watch

TypeScript / Cloudflare Workers / D1 / GitHub Actions

A criteria-driven product watcher that compares unit prices, checks product requirements and prepares qualifying-offer alerts.

- The public demo uses fictional watches, editable limits, simulated offers and email previews without login or real integrations.

Status Owner-only live workspace; public demo and private source.

Try the public demo

Fusion Almere FC

Java 21 / Spring Boot / Angular / Supabase

A football club platform for player registration, profiles and member administration, with an Angular frontend and Spring Boot API.

- Registration checks for duplicate accounts and records an audit trail. Email notifications follow committed database transactions.

Status MVP with a public test deployment. Membership features and payment-import workflows remain in development.

View the public test site

HomeWizard Energy Intelligence

Java / React / TypeScript / SQLite / Supabase

An application for collecting smart-meter readings and exploring energy history. The Java collector saves data locally before upload.

- Supports upload retries, replay and duplicate-ingestion prevention. The interface exposes reading coverage and freshness.

Status Private application and source. Historical exploration and load-shifting scenarios are supported; tariff, solar, battery and cost comparisons remain in development.
