odogwudozilla.com
LinkedIn profile
GitHub / Odogwudozilla

TECHNICAL FOCUS

Backend and APIs

Java, SQL
REST, SOAP, OpenAPI
Role-based authorisation

Quality and delivery

JUnit, Playwright
Integration testing
Test modernisation
Code review, CI/CD

Stack and tools

Git, Gradle, Maven
Liquibase, Db2
Angular, TypeScript

Personal projects

Spring Boot, Angular
React, TypeScript
PostgreSQL, SQLite
Supabase

Profile

I build and modernise insurance software at Keylane using Java, Angular and relational databases. I take features from solution analysis through to release, focusing on API migration, authorisation and automated testing. My earlier banking experience helps me understand customer workflows.

Professional experience

Keylane

Senior Software Engineer

Sep 2019 - Present | Utrecht, Netherlands

- Lead the ongoing replacement of a SOAP service with REST APIs, covering solution analysis, resource design, authorisation and test strategy. The migration is still in development.
- Build Java services and Angular workflows. Migrate legacy screens in stages and retire older routes and service versions.
- Implement role-based authorisation and Liquibase migrations. Analyse query plans and propose indexes for batch jobs and screens.
- Led replacement of a slow regression suite with faster integration tests. Add JUnit unit tests, database-backed integration tests and Playwright browser tests; investigate defects across code, data and APIs.
- Turn business requests into requirements, make solution decisions and review code. Support sign-off and write functional descriptions in English and Dutch, plus release documentation.
- Contributed to AI coding-assistant plugins and bug-triage workflows, with testing and human review.

Scotland's Rural College

Software Developer

May - Aug 2018 | Aberdeen, United Kingdom

- Helped design and implement a pilot portal for field-trials data collection and presentation, including user authentication and authorisation.

PROJECTS AND QUALIFICATIONS

EDUCATION

MSc
Information Technology

University of Aberdeen
Scotland
2018 - 2019

BSc Economics

University of Nigeria,
Nsukka
2006 - 2010

CERTIFICATION

Oracle Certified Associate

Java SE 8 Programmer

FURTHER TRAINING

DASA DevOps Fundamentals

Test Automation
Unit Testing

WebServices and XML

EARLIER CAREER

Head of Cash Operations

First Bank, Nigeria
Sep 2014 - Aug 2016

Led cash operations and customer service, including vault and ATM processes and operational investigations.

Selected engineering projects

Personal Product Watch

TypeScript / Cloudflare Workers / D1 / GitHub Actions

I'm building a product watcher that checks offers against product requirements and unit-price limits, and prepares alerts for qualifying offers.

- The public demo lets visitors change sample limits, compare fictional offers and preview an email without signing in. It does not check retailers or send email.

Status Live application for my own use; public demo and private repository.

Try the public demo

Fusion Almere FC

Java 21 / Spring Boot / Angular / Supabase

I'm building a football club platform for player registration, profiles and member administration, using Angular and a Spring Boot API.

- Registration checks for duplicate accounts and keeps an audit trail. Emails follow committed database transactions, so a rolled-back registration does not trigger an email.

Status MVP in development, with a public test deployment. Membership features and payment-import workflows remain in development.

View the public test site

HomeWizard Energy Intelligence

Java / React / TypeScript / SQLite / Supabase

I'm building tools to collect smart-meter readings and review energy history. The Java collector saves readings locally before upload.

- Failed uploads can be replayed without duplicate records. The interface shows gaps in the readings and how recent the data is.

Status Private application and source. Supports energy history and load-shifting scenarios (moving electricity use to a different time). Tariff, solar, battery and cost comparisons remain in development.
